

Company Profile 2022

Creativity. Innovation. Ingenuity. Since 1976, SPEA designs and manufactures the best automatic test equipment for electronic devices, such as silicon wafers, integrated circuits, MEMS and sensors, electronic boards, power modules. The company is now recognized as a global leader in this high-tech field.

These achievements were made possible by massive R&D investments – up to 20% of total revenues. In strict cooperation with the most important hi-tech firms worldwide, SPEA R&D team conceives and prototypes the machines for the final production test, when the product to be tested is still on paper. This ability represents a valuable advantage for electronics manufacturers, that can speed up their time to market in today's tough competitive environment. «In our field of activity» – says Luciano Bonaria, President & CEO – «Continuous research is a must. For our customers, it is essential to get the test equipment for their newly-developed technologies promptly. This requires us to invest a consistent amount of our revenues in the human resources engaged in research and development. We always need new ideas and fresh minds».

From vehicles to smartphones, to the most complex aerospace, medical, defense devices. With SPEA equipment, semiconductor and electronics manufacturers can ensure, day by day, the quality and reliability of their products. Because an accurate production test of every single device is the only way to ensure that the electronics we use everyday is free from any defect, and especially from those hidden defects that will cause failures only during the use.

During more than 45 years of activity, the company has continuously grown: SPEA currently employs 900 people worldwide (over 750 at the Headquarters in Volpiano, Turin, Italy), while yearly revenues are over 140M€.

SPEA business strategy brought the company to the choice to globalize its sales and support organization (SPEA systems are installed in over 85 countries), while keeping the core of R&D and manufacturing in Italy.
