

Since 1976, SPEA has committed to designing and implementing the best test equipment with creativity and innovation, by investing resources mainly in Research and Development and in the growth of personnel in order to realize state-of-the-art effective test solutions.

This effort has been the key to success for realizing high-innovation products adaptable to the multiple needs of customers.

To continue affording these results, SPEA adopts a Quality Management System compliant to ISO9001 international standard. The Quality Management System application is developed to guarantee an effective and efficient employment of resources, focusing on Customers' and other stakeholders' expectations and by anticipating them when possible.

According to such principles, this Policy defines the general elements to implement the Quality Management System.

In particular, it undertakes to:

1. Ensure maximum customer satisfaction
2. Ensure compliance with legal and regulatory requirements
3. Fostering competence, awareness and involvement of personnel
4. Ensure reliable partnership relationships
5. Protect Customers and Suppliers property
6. Improve Quality Management System
